Instructional Associate
Louisville, KY

Emily Rogalski
Teaching Assistant
Denver, CO

Introduce Yourselves

- Your name
- Where in the world are you?
- What brought you to this course?

 © 2020 General Assembly

Our Learning Goals

The purpose of this deck is to ensure that all students are confident and prepared to learn in a remote environment.

- **Become familiar** with the remote learning environment.
- **Introduce** norms & best practices when it comes to using Zoom, Slack, & Google Classroom.
- **Learn** how to succeed as a student.

Become Familiar with the Remote Learning Environment

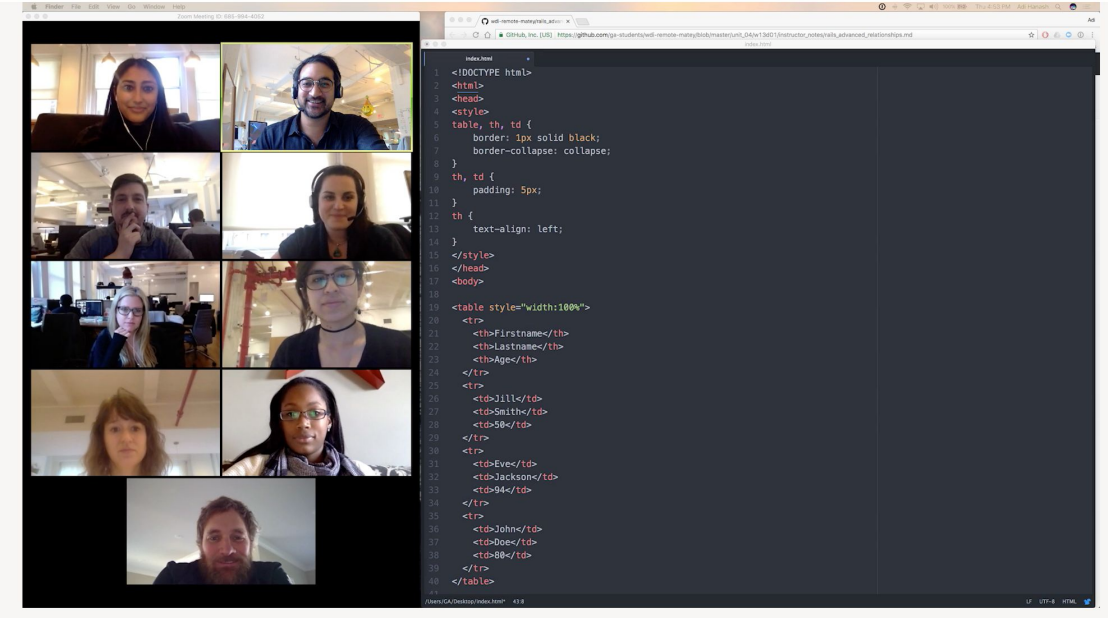

At GA, we leverage different platforms when teaching online to make the experience as interactive & engaging as possible:

- **Zoom** for video conferencing.
- **Slack** for in-class communication & checks for understanding.
- **Google Classroom** for identifying & submitting assignments.

Because our online classes are hosted live & are interactive, getting used to managing those platforms on your screen is the first step to ensuring your success.

Your Screen

GENERAL ASSEMBLY

zoom

Zoom Norms & Best Practices

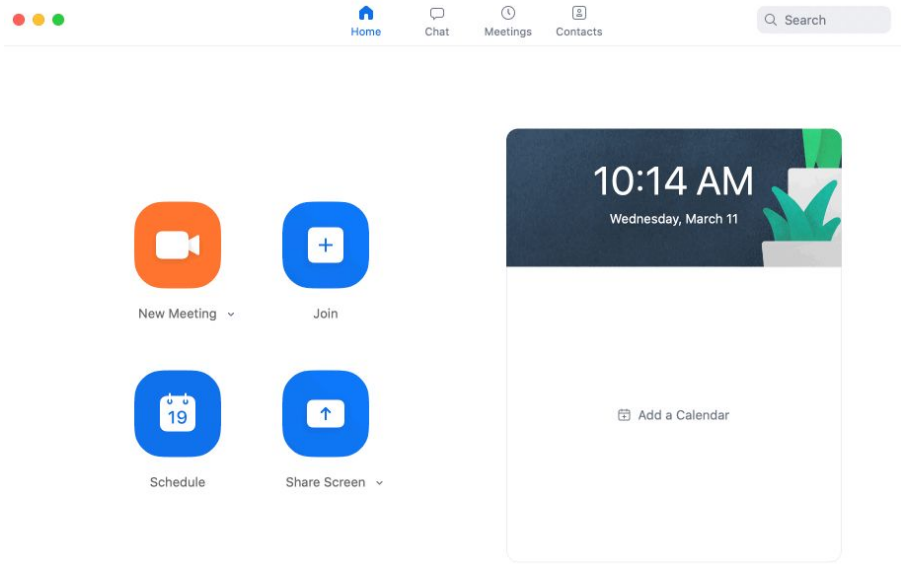

Zoom is a video-conferencing platform. It's similar to Google Hangouts or Skype, but it provides your instructional team with robust option such as:

- **Screen-sharing** so that you can follow along with their slides, code, & demonstrations.
- **Breakout Rooms** so that you can work in small groups on exercises & projects.
- **Recording sessions** to the cloud for you to review important lessons as needed.

Zoom Norms & Best Practices

On the day of the meeting:

- Join the zoom call a few minutes before the start of class.
- You can join the meeting by
  - clicking on the zoom link or
  - by typing in the zoom Meeting ID in Join Meeting on your desktop app.
- Set your yourself to **mute!**
- Make sure your **video is turned on**.

Zoom Norms & Best Practices

Be Present

- Class time should be a distraction free zone. Please set boundaries in your household by letting everyone know that you will be unavailable for those active class hours. This way you can direct your full attention to class!
- **You should be on camera for the entirety of the class, unless you need to step away briefly. If you do need to step away, let your instructional team know via direct message on Slack.**

Be Mindful

- You should be on mute during lecture & when you are not speaking. This will allow for no background noise to impede learning.
- Make sure you're in a well-lit space with as few distractions in the background as possible.

Be Participatory

- Have a question? Raise your "Zoom" hand! Instructor not seeing it? Feel free to come off mic!
- Slack will also come in handy whenever you want to share your thoughts.

Any questions about Zoom?

slack

Slack Norms & Best Practices

Slack will be your main point of communication with each other and the instructional team.

If you haven't already, please do the following:

- Make sure you **download Slack** on your phones & desktops.
- **Accept the invitation** to the Slack Workspace for your course.
- Please **keep an eye on the slack channel** for important announcements by the instructional team.
- Set up your Slack profile with **a photo and your full name**.

Slack Norms & Best Practices

Slack is a messaging platform that allows for easy, organized communication between teams. Instructors leverage Slack throughout the course in order to:

- Share the day's learning objectives, in-class resources, slides, and exercise prompts.
- Make announcements to the whole class.
- Check for understanding as they cover key concepts.
- Gauge how much longer students need on group exercises.

Today, you will become familiar with (if you haven't already) finding slack channels, direct messaging, using emoji responses & replying via thread!

Slack Norms & Best Practices

Our channels (you will be added to all of them by end of day today):

- **dsb-ec-521-classroom**
  - Our main channel. Zoom link, daily schedule, lesson objectives, prompts in lessons, etc.
- **dsb-ec-521-parkinglot**
  - Have a lingering question that has not been answered? Can't find the answer on your own? Feel free to post (and respond!) in this channel!
- **dsb-ec-521-resources**
  - Find a cool resource you want to share with others? Discovered something that could be useful to your fellow classmates? Drop it here!
- **dsb-ec-521-partytime**
  - Find a funny data science meme? Want to post a picture of how cute your dog is? This channel is whatever you want it to be!
- **dsb-ec-521-studentlounge**
  - Want to get a study group going? Wanna chat with each other without the instructors?

Come back in 10 minutes!

OFFICE HOURS

WHERE?

#dsi-office-hours

WHEN?

Monday - Thursday @ 6pm - 10pm EST

Sunday @ 5pm - 8pm EST

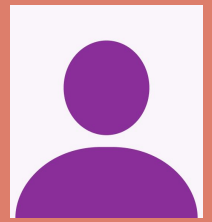

WHO?

Jeff Alexander

Emily Rogalski

Jayson Villena

Slack Norms & Best Practices

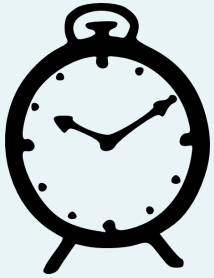

Let’s practice in the dsb-ec-521-classroom channel!

- Respond with emojis
- Reply in thread
- Single line of code/code block
- Responding to polls

Any questions about Slack?

COURSE EXPECTATIONS

Typical Daily Agenda

- **Breakfast Hour:** 9am-10am EST
- **Morning Lesson:** 10am-12pm EST
- **Lunch:** 12pm-1pm EST
- **Afternoon Lesson:** 1pm-3pm EST
- **Flex Time:** 3pm-5pm EST

Attendance

- You may not be absent more than 3 days.
- 3 tardies = 1 absence
- Something come up? Reach out to your instructors ASAP!

ASSIGNMENTS

- **Labs**
  - Typically two due each week. Check Google Classroom for due dates!
- **Quizzes**
  - Typically one conducted every other week. Will be facilitated through Google Classroom. Need a 60% or higher to pass.
- **Projects**
  - Five total projects and one capstone project. More info to come!

In order to pass this course, you need satisfactory completion of ALL projects and satisfactory completion of 80% of assignments (including labs and quizzes) in each unit.

RESUBMISSIONS/RETAKES

- **Labs**
  - If your lab is not yet passing, we will give feedback in Google Classroom and return the assignment back to you. You will have until one week after the end of the unit to resubmit your lab, however we highly suggest that you resubmit it ASAP.
- **Quizzes**
  - If you did not reach 60% on your first attempt of the quiz, you will have an opportunity to retake the quiz (different questions) the following week.
- **Projects**
  - Not reaching the minimum requirements on a project is a **huge deal**. However, you have ONE resubmission for the entire course that you can use to resubmit a project or turn in a project late.

Any questions?

Approaching the Workflow

Google Classroom

Many have joined through the link that was emailed, but a link will be put into Slack as well!

GitHub

More info on GitHub to come later... for now, I want to make sure everyone has been added to our organization. Everyone that filled out the Tech Survey has been added.

If you CANNOT access the link that is posted in Slack, please add your GitHub Enterprise username in thread.

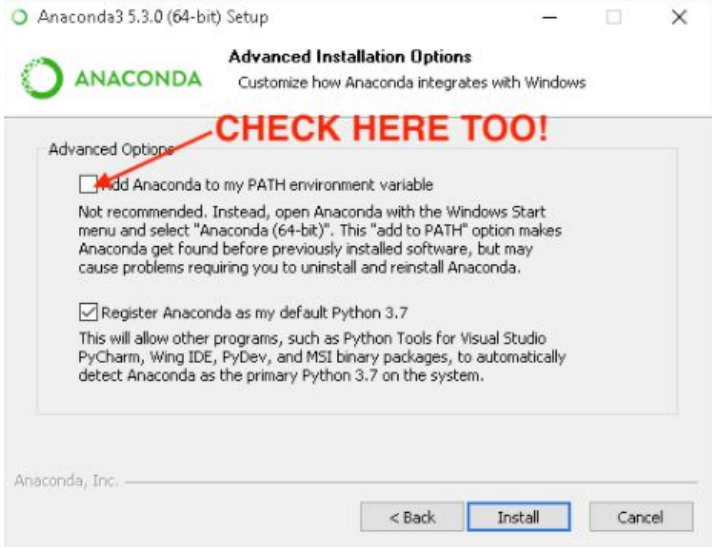

INSTALLFEST

Things You'll Need!

#1: Anaconda

- Download at: **anaconda.com/download**
- Mac: Use the "graphical installer"
- Mac and Windows: Make sure to check the non-recommended pictured here ➜

To verify:

```
which conda
which python
```

 © 2020 General Assembly

Things You'll Need!

#2: A Command Line Interface

- Mac: You're done! The included **Terminal** program is enough.
- Windows: Please install a program called Git Bash
  - https://git-scm.com/downloads
  - Yes it's a sketchy website but it's legit, I promise

Things You'll Need!

#3: Git

- Windows: You're done! Git Bash came with Git
- Mac: First install the preferred Mac package manager, **Homebrew**
  - https://brew.sh/
  - At the top of this page is a crazy looking shell command, paste it into the Terminal and run it. May take a few minutes. This is Homebrew installing itself.
- Mac: Next, use Homebrew to install Git
  - `brew install git`

Things You'll Need!

#4: VS Code (or a text editor of your choice)

- https://code.visualstudio.com/download
- This will be our preferred text editor for the class. If you've done this sort of thing before, and you have strong opinions on using a different text editor, that should be fine. We won't use it too often, anyway.

INSTALLFEST

Have you successfully installed Anaconda and Python? Let's check!

1. Go to your Terminal (for Mac Users) or Git Bash (for Windows Users).

2. Type the following command:

```
conda -V
```

The output should be something like this (don't worry if your version number is slightly different):

```
conda 4.12.0
```

3. Type the following command:

```
python -V
```

The output should say something about Python with a version number that starts with "3" (e.g. "Python 3.9.7"). The exact version number should not matter, as long as it starts with "3" and not "2".

Respond in Slack!

Creating Environment

Creating and activating the conda environment isolates a specific directory on your computer with a specific version of Python, and associated Python libraries that can be contextually used for development of data science projects.

This contextual isolation allows us to install and use specific libraries and dependencies for projects we will build in class, without impacting your base system, or other "Anaconda Environments" we may want to configure and use in the future. Using these types of environments are supported industry best practices for managing Python projects.

4. Type the following command: `conda install nb_conda`

5. Type the following command: `conda create -n dsi python=3.9.7 anaconda`

6. Type the following command: `conda activate dsi`

7. Type the following command: `conda install nb_conda statsmodels widgetsnbextension nltk gensim seaborn scikit-image scikit-learn psycopg2 plotly bokeh ipywidgets flask beautifulsoup4`

Respond in Slack!

INSTALLFEST (Cont.)

Let's check if Git is installed!

8. Type the following command: `git --version`

Respond in Slack!

9. Use the following commands to provide git with your name and email. Make sure to use the same email address that you registered at https://git.generalassemb.ly:

```
git config --global user.name "Your User Name"
git config --global user.email "your.name@example.com"
```

Thank you!

We’re all looking forward to getting to know you all over the course of the next few months!

Now go enjoy your lunch!
